Infrared receiver Charger Case

Product Description

Our CR-DS40A infrared receiver charger case can be used to not only charge 40 infrared receivers but also store these receivers. Due to a special design, when the IR receivers are stored in the charging box, moving or shaking the box will not affect the receivers.

When the CR-IR3002A-8/16 infrared receiver is put in the charger case for charging, if the indicator on the charging case is red, this means the infrared receiver is being charged; if the indicator is green, that means the contact between the receiver and the charging cradle may be poor.

After the battery of IR receiver is fully charged, the indicator is supposed to be green. However, if the IR receiver has been charged for 8 hours but the indicator is still red, check whether the contact between the receiver and the charging cradle is good.

Technical Parameters

Model	CR-DS40A
Power supply	100V-240V AC
Size	494Lx395Wx112H (mm)
Weight	About 5kg
Max. power consumption	100W
Static power consumption	17W (there is no receiver on charge)
